# Hose Supports

**D. L. George & Sons Mfg. makes two types of Hose Supports to improve efficiency in the parlor. The Adjustable Hose Support can be raised to improve milker positioning on cows with high udders while the Non-Adjustable Hose Support is set at a fixed height above the curb. Both types of supports can be moved laterally along the curb so you can position the unit as necessary, and it can be moved from stall to stall so you don't even have to buy a support for every stall. The clip that holds the hose can be adjusted to work with all diameters of milk lines. The supports are made of 1/8" type 409 stainless steel. The clamp on the Adjustable Hose Support is made of Ultra High Molecular Weight Polyethylene (UHMW). We also customize hose supports for special applications or unique curbing arrangements.**

**Improve parlor efficiency, reduce squawking, get better milk-out and save money with D. L. George & Sons Mfg. hose supports!**
