STAINLESS STEEL TIP WATERER

The Stainless Steel Tip Waterer from D. L. George & Sons Mfg. is the efficient way to provide a continuous supply of fresh water for your cows as well as to keep the heavy traffic areas around your water supply neat and clean. If you are looking for ways to maintain herd health, increase milk production reduce labor costs and promote overall efficiency in your animal housing facility, the Stainless Steel Tip Waterer is another important tool.

Installation is very straightforward. The tip waterer comes with all the key components: stainless steel tank, stainless steel mounting pedestals, float, shutoff valve, flexible water hose and tip handle. It is also available in a variety of sizes so it can fit into almost any facility (4', 6', 8' and 10').

The tip waterer is easy to use and maintain. The float keeps the tip waterer full so your cows always have plenty of water leaving you free to concentrate on other herd management tasks. To clean the area in front of the tip waterer you just pull the tip handle and in seconds you have cleaned one of the high traffic areas of your barn.

The tip waterer is built to last. The T304 stainless steel tank will provide many years of trouble free operation without the worries about corrosion. The float is covered with a stainless steel cover to protect it from damage from animals. The pivot mechanism includes UHMW (Ultra High Molecular Weight Polyethylene) bushings so you never have to worry about lubrication.

Best of all, the Stainless Steel Tip Waterer from D. L. George & Sons Mfg. is priced very competitively with many galvanized waterers. Inexpensive and built to stay that way.
